Sai Krishna

Senior Frontend Engineer | React.js | TypeScript | Next.js | Micro Frontends
Hyderabad, India | +91 8008663728 | saikrishs184@gmail.com | linkedin.com/in/sai-krishna-b14804249 | Portfolio: saikrishna-dev-eight.vercel.app

SUMMARY

Senior Frontend Engineer with 5.5 years of experience building scalable, production-grade web applications using React.js and TypeScript across healthcare, AI-enabled, and enterprise SaaS platforms. Strong experience in frontend architecture, micro-frontend systems using Vite Module Federation, API integration, reusable component design, testing, and performance optimization. Experienced in owning frontend delivery across multi-portal, multi-tenant healthcare applications and AI-powered testing platforms, collaborating with backend and product teams through development and production.

TECHNICAL SKILLS

Frontend	React.js, TypeScript, JavaScript, Next.js, React Native, React Router, i18next, HTML5, CSS3
State & Data	Redux Toolkit, Redux, React Query, Context API
Architecture & Build	Micro Frontends, Module Federation, Vite, Reusable Component Architecture
UI & Styling	Material UI, Tailwind CSS, Bootstrap, Chart.js
Forms & Testing	React Hook Form, Yup, Jest, Vitest, React Testing Library
APIs & Backend	REST APIs, GraphQL, Axios, Fetch API, Swagger, Node.js, Java, PostgreSQL, MySQL, dotCMS
Tools	Git, Postman, Figma, Chrome DevTools, Docker, AWS, GitHub Actions
Engineering Practices	Performance Optimization, Responsive Design, Accessibility, Reusable Components, API Integration, Agile
AI/ML	Gemini, MedGemma
AI-Assisted Development	Claude, Cursor, Codex

PROFESSIONAL EXPERIENCE

Ratna Global Technologies — Oct 2025 – Present
Member of Technical Staff II

Ratna HealthPlex — *Unified Healthcare Platform*

- Contributed to a multi-tenant healthcare platform built as 8 independently deployable micro-frontends (Admin, Auth, Physician, Nurse, Patient, Pharmacy, Laboratory, Landing) composed via Vite Module Federation within a pnpm monorepo, sharing a common design system, authentication layer, and Redux store.
- Built and refactored UI for HIPAA/DPDP-compliant Breach Management, Audit Management, Consent Management, and DSAR screens, integrating React Query-driven API layers with role-based access control.
- Delivered end-to-end UI and API integration for the Pharmacy module's Prescription and Dispense screens, including barcode-scanning workflows for medication verification, and built its Dashboard from scratch with live operational metrics.
- Integrated a MedGemma-powered image-review feature that flags clinical findings for doctor follow-up, and collaborated with backend engineers on tenant-aware APIs supporting the platform's multi-tenant architecture.

Dr. Basu Eyecare — *Multi-Branch Clinic Platform*

- Onboarded a multi-branch clinic client (Eyecare + Panchakarma) onto the shared HealthPlex multi-tenant platform, inheriting its existing MedGemma-powered eye-image review capability.
- Extended shared Front Office, Doctor Consultation, Lead Management CRM, Pharmacy, and Admin modules for the new tenant, including Reports, Notifications, and Download Center capabilities.

Ratna Test AI — *AI-Powered Software Testing Platform*

- Owned the UI/UX Testing module end-to-end within a 16+ micro-frontend testing platform, migrating it from a monolithic React app into an independent Vite Module Federation remote, building manual, recorded, and Gemini-powered AI-generated test-case authoring, and implementing its authentication/session handling and Axios API client.
- Implemented cross-browser and multi-device test execution via distributed agent nodes, self-healing test locators, and parameterized/data-driven testing, along with reporting/analytics dashboards, audit logging, and project/team management features.
- Migrated the Database Testing module into its own micro-frontend, integrated REST APIs for test execution and connection management across SQL, NoSQL, time-series, and graph databases, and refactored its state management to React hooks with a watch-based update pattern.

Additional Engineering Contributions

- Reviewed pull requests, maintained Vite build tooling, contributed Java-based backend changes, and built HealthPlex's CI/CD pipeline — per-app Docker images, AWS ECR, and GitOps auto-deploy on merge — while maintaining primary frontend ownership.
- Contributed shell-level integration for the testing platform, including landing page header/footer and micro-frontend routing and port configuration, supporting federation across its 16 domain modules.
- Use AI-assisted development tools — Claude, Cursor, and Codex — for code exploration, implementation, debugging, and day-to-day frontend engineering workflows.

Techmojo Solutions — Dec 2023 – Mar 2025
Member of Technical Staff

DDRL — *Real Estate Marketplace App*

- Built a cross-platform property-search application integrating Google Maps and real-time chat between buyers and agents, using React Native and Firebase.
- Partnered with the engineering team on UI requirements and design reviews throughout development.

PPBET — *Multi-Brand Betting Platform*

- Delivered a multi-brand sports-betting and casino platform implementing real-time odds updates and personalized notifications across brands, using React.js, Next.js, and dotCMS.
- Built a shared, reusable component library used across multiple brand experiences, and debugged and stabilized application code across releases.

Protonshub Technologies — May 2022 – Feb 2023
Software Engineer

Marketing Management — *CRM Platform*

- Owned frontend development on a client-facing CRM platform for managing clients, calls, meetings, and tasks, using React.js, Redux, TypeScript, and Material UI.
- Covered core workflows with Jest test suites to guard against regressions.

Tanama Software Pvt Ltd — Mar 2020 – May 2022
Software Engineer

Tech Passport — *Skills-Tracking Platform*

- Built a skills-tracking web platform for a training organization, giving students test-based performance feedback, using React and Node.js.
- Gave administrators tools to manage trainers, training plans, and assessments across the platform.

Dental App — *Clinic Appointment Platform*

- Delivered a Dental App enabling online appointment booking and doctor assignment for patients, using React and TypeScript.
- Built patient communication features into the appointment flow, establishing initial frontend architecture and UI patterns as requirements evolved.

EDUCATION

B.Tech, Electrical & Electronics Engineering (EEE) — JB Institute of Engineering and Technology (2015 – 2018)
Diploma — JN Government Polytechnic (2012 – 2015)
